CAREER DEVELOPMENT

Fides Solutions, 2015 – Present
IT Manager
Work hand-in-hand with our clients to cover their IT needs, while maintaining an outstanding relation through committed service in a timely manner

- Negotiated with ISP to slash monthly cost of internet by 10% for our largest client

- Ensure the optimal performance of business-critical networks, workstation equipment, websites, user applications, and databases.

- Assess the capabilities of existing systems and processes with the goals of identifying improvement opportunities

- Evaluate emerging technologies for suitability with long-term business goals

- Elevated productivity two-fold by unionizing two separate workgroups and synergizing multiple departments, saving our client time and money

- Installed various server environments such as Hyper-V for RDP

- Maintained Windows Active Directory for all clients and their employees

- Currently rebranding our largest client, redesigning their website from ground up

- Maintain client websites by updating text and images and adding functionality such as login capability

- Procure hardware, software, and equipment

Various Clients, 2008 – Present
Web Developer

Freelance web designer/developer with accountability for marketing and selling services, managing all client relationships, controlling budgets, and designing/developing websites and web based applications.

- Completely redesigned website to work as web application using the Meteor.js development environment, including Node.js and MongoDB

- Designed, developed and implemented proof of concept, platform independent social application layer (User Interface, application/business and data access tiers) based on 3rd party web services from the cloud (Data provider/storage).

- Selected to design and develop web presence for start-up company. Currently creating user-friendly website and back-end e-commerce system that will allow the company's employees to make updates to the site and manage customer accounts.

- Created a jQuery plugin for use among as many environments as possible while maintaining version control through the use Git

- Developed numerous Javascript and jQuery applications, some using the Meteor.js environment

- Painstakingly tweaked webpages to decrease download times and increase user experience

- Developed complex algorithms for querying multiple databases such as MySQL, PostgreSQL, and MongoDB

- Designed and developed a customer portal on the company website that allowed direct communication with clients and our customer service department as well as providing clients and account administrators with client data visualizations.

- WAMP/LAMP Stack Administration/Configuration
